IN THE ABSTRACT

2 A method of sharpening bedknives for reel type mowers by
3 installing sets of locator surfaces in a bedknife grinder, grinding
4 the surfaces with the grinder to be aligned and parallel,
5 installing a bedknife located against surfaces in both sets, and
6 electromagnetically locking the bedknife in position while grinding
7 the edge to be sharpened. The bedknife is adjusted to be aligned
8 with the reel blades by adjusting the bedknife pivots in the mower.
